Mathematics and Statistics

Laura DeCarli, Professor and Chair
Hassan Zahedi-Jasbi, Associate Professor and Director of the Statistics Division
Dongmei An, Senior Instructor
Leonid Bekker, University Instructor
Umut Caglar, Instructor
Chongsheng Cao, Professor
Zhenmin Chen, Professor
Ronan Conlon, Assistant Professor
Tedi Draghici, Associate Professor
Julian Edward, Professor
Domitila Fox, University Instructor
Edgar Fuller, Professor and Director of the Center for the Transformation of Teaching Mathematics
Ciprian Gal, Associate Professor
Maydelin Galvez, Instructor
Florence George, Associate Professor
Gauri L. Ghai, Associate Professor and Advisor
Susan Gorman, University Instructor
Gueo Grantcharov, Professor
Stephan Grigoriev, Instructor
Sneh Gulati, Professor
Yanqiu Guo, Assistant Professor
Kathleen Guy, Instructor
Jerry Hower, Senior Instructor
Kai Huang, Associate Professor
Steven M. Hudson, Professor
George Kafkoulis, Associate Professor
Golam Kibria, Professor
Solange Kouemou, Senior Instructor
Thomas Leness, Professor
Bao Qin Li, Professor
Dane McGuckian, University Instructor
Lakshmy Menon, Instructor
Idris Mercer, Instructor
Roneet Merkin, Instructor
Abdelhamid Meziani, Professor
Jie Mi, Professor
Ada Monserrat, Senior Instructor
Sergio Perez, Instructor
Shivanni Ramhit, Instructor
Taje Ramsamujh, Associate Professor
Laura Reisert, Senior Instructor
Louis Roder Tcheugoue Tebou, Professor
Alireza Rostamian, Senior Instructor
Svetlana Roudenko, Professor
Philipppe Rukimbira, Professor
Samuel S. Shapiro, Professor Emeritus
Robert Storfer, Senior Instructor
Yuanchang Sun, Associate Professor
Theodore Tachim Medjo, Professor
Klaus Utikal, Instructor
Enrique Villamor, Professor
Weii Wang, Associate Professor
Zhongming Wang, Associate Professor
Anna Wlodarczyk, University Instructor
Wensong Wu, Associate Professor
Yi Zhi Yang, Senior Instructor
Mirroslav Yotov, University Lecturer
John Zweibel, Associate Professor, Advisor and Undergraduate Director

Master of Science in Mathematical Sciences

Admission

The following are in addition to the University's graduate admission requirements:

1. Bachelor's degree in mathematics, applied mathematics or mathematical sciences from an accredited university or college. A bachelor's degree in some other discipline is also acceptable provided the applicant has sufficient mathematics background. The following courses (or equivalent courses) are required for those whose bachelor's degrees are not in mathematics, applied mathematics or mathematical sciences: Advanced Calculus, Linear Algebra, Complex Variables and Algebraic Structures.

2. A 'B' average or higher in upper division mathematics courses.

3. Graduate Record Examination (GRE) taken within the past five years. At least 151 on the quantitative portion of the GRE, or an earned graduate degree from an accredited institution and the approval of the department. Risk Analysis Management Track applicants are allowed to use Graduate Management Admission Test (GMAT) to meet the admission requirement instead of GRE. The minimum required GMAT total score is 500.

4. Three letters of recommendation concerning the candidate's achievement and potential, from persons familiar with the candidate's previous academic performance.

5. International graduate student applicants whose native language is not English are required to submit a score for the Test of English as a Foreign Language (TOEFL) or for the International English Language Testing System (IELTS). A total score of 80 on the iBT TOEFL or 6.3 overall on the IELTS is required.

6. Approval of the Graduate Committee.

Option 1

The student must complete a minimum of 24 semester hours of graduate course work. This course work must include 5 courses from the following two lists, with at least 2 from each list.

List A:

- MAA 6406 Complex Analysis 3
- MAA 6616 Real Analysis 3
- MAP 5316 Ordinary Differential Equations 3
- MAS 5311 Graduate Algebra 3
- MAS 5312 Galois Theory 3
- MGF 5107 Graduate Set Theory 3
- MGF 5306 Graduate Mathematical Logic 3
- MGF 5325 Theory of Recursive Functions 3
- MTG 5326 Introduction to Algebraic Topology 3
- MAP 5415 Introduction to Fourier Analysis 3

List B:

- MAA 5405 Numerical Methods 3
- MAA 5236 Mathematical Techniques of Operations Research 3
- MAP 6326 Partial Differential Equations 3
- MAP 5407 Methods of Applied Analysis 3
- MAS 5145 Applied Linear Algebra 3
- MAP 5467 Stochastic Differential Equations 3
Graduate Catalog 2019-2020 College of Arts Sciences and Education 185

STA 5446 Probability Theory I 3
STA 5447 Probability Theory II 3

Electives

The remaining 9 hours of course work will be used to enhance a coherent program of study best suited to the student's needs and interest. This requires the prior approval of the Graduate Committee and may be done in one or a combination of the following ways: a) Further work from lists A and B. b) A maximum of 2 courses of independent study, taken with Mathematical Sciences faculty. c) Graduate level course work in Engineering, Physics or Statistics.

Master's Project

The student will complete his or her graduation requirements by writing an expository paper under the direction of a faculty member. The student may earn six credit hours (MAT 5970 Master's Research) in preparing the project. Successful completion of the Master's project requires a grade of 'B' or higher, as well as approval of a committee consisting of three mathematics faculty (including the director).

Remarks: The course work must be completed with a 3.0 or higher Grade Point Average (GPA) and a grade of 'C' or higher in each course. A maximum of six graduate semester hours may be transferred into the program from outside the University, subject to the approval of the Graduate Committee. A total of 30 credit hours is required for graduation.

Option 2

This course work must include 7 courses from List A and List B in Option 1, with at least 3 courses from each list.

Electives

Same as in Option 1.

Option 2 has no Master's Project requirement

Remarks: The course work must be completed with a 3.0 or higher Grade Point Average (GPA) and a grade of 'C' or higher in each course. A maximum of six graduate semester hours may be transferred into the program from outside the University, subject to the approval of the Graduate Committee. A total of 30 credit hours is required for graduation.

Risk Analysis and Management Track

This track will consist of 12 one-semester three credit graduate courses, and one optional elective during the last semester of the program. The degree will be completed in 12 months. Full time students will take four courses per semester to complete the program in three semesters.

Admission Requirements

Admission requires a Bachelor's in Mathematics or related fields. In addition, applicants must satisfy conditions 3 through 5 in the admission requirements for our Master of Science in Mathematical Sciences, and have a GPA of at least 3.0 in undergraduate studies. Admission to the program requires applicants to have a firm grasp of mathematics at a high undergraduate level. This means calculus through multivariable calculus, linear algebra and differential equations. Knowledge in probability, statistics, computer programming, economics, or finance is recommended but not required. A student with promise but lacking prerequisites may be admitted but required to take one or more preparatory courses during their first semester.

Degree Requirements

The track in Risk Analysis and Management (RAM for short) requires 36 credits. The student must take 12 graduate credits, 3 credits each.

Course Requirements

Fall Term
- MAP 6635 Risk Analysis and Management I 3
- FIN 6428 Corporate Finance 3
- COP 6007 Computer Programming Concepts 3
A course from List I below (to be chosen based on the class’ background) 3

Spring Term
- MAP 6636 Risk Analysis and Management II 3
A course from List I below (to be chosen based on the class background) 3
- MAD 5405 Numerical Methods 3

Summer Term
- MAP 6632 PDE in Risk Analysis and Management 3
- MAP 6637 Risk Analysis and Management III 3
- ECO 7429 Topics in Econometrics 3
- FIN 6515 Security Analysis 3
- FIN 6426 Financial Management Policies 3
- or

List I
- MAP 5204 Optimization and Linear Algebra 3
- MAA 6616 Real Analysis 3
- STA 6326 Mathematical Statistics I 3
- STA 3033 Introduction to Probability and Statistics for CS 3

Combined BS in Mathematics/MS in Mathematical Sciences

This program will allow strong students in mathematics to complete a bachelor’s degree and a master’s degree in 5 years rather than the usual six. A minimum of 140 credits are required for graduation with both the bachelor’s and the master’s degree. In addition to fulfilling the requirements for the Bachelor's degree in mathematics, these 140 credits include 30 graduate credits required for the Master’s of Science in Mathematical Sciences. A maximum of ten (10) graduate mathematics credits can be concurrently used toward the bachelor’s and master’s degrees.

To be considered for admission to the combined bachelor's/master's degree program, students must have completed at least 75-90 credits in the bachelor's degree program at FIU and meet the admissions criteria for the graduate degree program to which they are applying. Students need only apply once to the combined degree program, but the application must be submitted to Graduate Admissions before the student starts the last 30 credits of the bachelor's degree program. A student admitted to the combined degree program will be considered to have undergraduate status until the student applies for graduation from their bachelor's degree
program. Upon conferral of the bachelor’s degree, the student will be granted graduate status and be eligible for graduate assistantships. Only 5000-level or higher courses, and no more than the number of credits specified by the program catalog, may be applied toward both degrees.

Admission Requirements
1. Current enrollment in a Bachelor’s degree program in mathematics.
2. Current overall GPA of at least 3.2 and GPA of at least 3.2 in upper division courses.
3. Completion of 75-90 undergraduate credit-hours.
4. (Verbal and Quantitative) GRE scores with a minimum of 151 in the quantitative portion before entering the MS phase of the program.
5. Approval of the graduate committee.

Completion Requirements
Year 1 and 2:
MAC 2311 Calculus I
MAC 2312 Calculus II
MAC 2313 Calculus III
MAS 3105 Linear Algebra
MAP 2302 Ordinary Differential Equations

Year 3
Fall
MAA 3200 Introduction to Advanced Mathematics
STA 4321 Introduction to Mathematical Sciences I
One course from List 1 or 2

Spring
MAA 4211 Advanced Calculus
MAS 4301 Algebraic Structures
One course from List 1 or 2

Summer
One course from List 1 or 2 and 1 graduate course

Year 4
Fall
MAA 6616 Real Analysis
One course from List 1 or 2
Senior Seminar (1 credit)

Spring
One graduate course
Two courses from List 1 or 2

Summer
Three graduate credits

Year 5
Fall
Nine graduate credits

Spring
Nine graduate credits

The graduate courses distribution should follow catalog descriptions of the master’s program requirements. Students must take at least 3 courses from List 1 and at least 3 courses from List 2. The balance of the 140 semester hours required for graduation may be chosen from any courses in the university, a minimum of six (6) of these should be at the upper division level or higher.

List 1
MAD 4203 Introduction to Combinatorics 3

List 2
MAP 4401 Advanced Differential Equations 3
MAD 3305 Graph Theory 3
MAP 3103 Mathematical Modeling 3
STA 4322 Mathematical Statistics II 3
MAD 3401 Numerical Analysis 3
MHF 4302 Mathematical Logic 3
MHF 4102 Axiomatic Set Theory 3

Doctor of Philosophy in Applied Mathematical Sciences

Admission Requirements
1. Have a bachelor degree in Mathematics or another quantitative field
2. Have a GPA of at least 3.0 in the bachelor’s Degree
3. GRE test results
4. Have three letters of recommendation, a copy of the transcript, and a copy of the university graduate application to the Graduate Program Director in accordance with University Graduate School deadlines.
5. Have received approval of the departmental graduate committee
6. Foreign student whose native language is not English must obtain a score of 80 or higher on the TOEFL iBT (this corresponds to 550 on the old TOEFL test) or 6.3 overall on the IELTS. The University Graduate School has a list of countries that are exempt from this requirement.

Core Courses
MAA 6616 Real Analysis 3
MAA 6406 Complex Analysis 3
MAD 5405 Numerical Methods 3
MAP 5316 Ordinary Differential Equations 3
MAP 6326 Partial Differential Equations 3
MAS 5145 Applied Linear Algebra 3
MAP 5255 Scientific Computations 3
MAT 5921 Training in Mathematical Expositions 1
MAT 6946 Applied Experience Component 1

Thesis Preparatory Courses
MAA 6506 Functional Analysis 3
MAA 6217 Calculus of Variations 3
MAD 6409 Numerical Methods II 3
MAD 7408 Topics in Numerical Analysis 3
MAP 5415 Introduction to Fourier Analysis 3
MAP 6357 Partial Differential Equations II 3
MAP 7359 Topics in Partial Differential Equations 3
MAP 6218 Stochastic Calculus 3
STA 5446 Probability Theory I 3
STA 5447 Probability Theory II 3
STA 6807 Queuing and Statistical Models 3

Course Requirements
Of the 75 credit hours of required coursework, 23 credits will be made up of the 9 core courses. All students must
take these 9 courses. All students must also take four courses (for a subtotal of 12 credits) from the thesis preparatory courses list. All students must take 25 credits of independent study and seminars as dissertation research courses. The remaining 15 credits of the required 75 may be filled by courses from:

1. Any courses from the thesis preparatory courses which are not counted as the four courses above.
2. Courses from the elective list.
3. Courses of level 5000 or higher from Computer Science, Statistics, Physics, Economics, or Engineering approved by the Graduate Committee.
4. If a student has a co-advisor from another department, then at least 6 credits must be taken from the other department.

Graduation Requirements

1. Completing a total of 75 credit hours of course
2. A grade of ’B’ or higher in all required core courses and a cumulative average of 3.0 or higher in the 75 credits of coursework.
3. Successful completion of the written portion of the Qualifying Exam. This examination is designed primarily to make sure the student has suitable background knowledge to conduct research in his/her chosen area. The student must pass the written Qualifying Exam by the end of the fifth semester (excluding summers) in the program. Two attempts are permitted. Any exception needs to be approved by the Graduate Committee. The student chooses any two of the following three areas of the exams: (1) Analysis (including both real analysis and complex analysis); (2) Differential Equations (including both Ordinary Differential Equations and Partial Differential Equations); (3) Numerical Analysis.
4. Choosing advisor(s). The student will choose a faculty from the Department of Mathematics and Statistics as their dissertation advisor. A co-advisor could be selected from within the department or from outside.
5. Successful completion of the oral portion of the Qualifying Exam. The student will present and defend an oral examination. The purpose of this exam is to verify that the candidate has chosen a suitable topic for dissertation research and to evaluate the candidate’s ability to conduct such research. The student will normally take the oral examination after completion of the core requirements and the written portion of the Qualifying Exam. The oral examination will be conducted by a panel of math faculty including the student’s advisor(s). During the oral examination, the candidate presents his/her accomplished and proposed research and answers questions from the panel and others in the audience.
6. Upon completion of the required core courses and passing both portions of the Qualifying Exam, the student advances to Candidacy.

Dissertation Requirements

1. The student will assemble a Dissertation Committee of at least four faculty members [including advisor(s)], three of whom will be from the Department of Mathematics and Statistics.
2. Demonstrate a reading knowledge of a language other than English in which there is a significant body of mathematics.
3. Submission and defense of a dissertation based upon original research in mathematical science. A dissertation is required of all candidates for the PhD degree and must conform to the format outlined in the Regulations for Thesis and Dissertation Preparation Manual available to students online from the FIU Graduate School.
4. After submission of the dissertation and completion of all other required work for the PhD degree, the candidate will be given a final oral thesis defense examination by the Dissertation Committee. Successful completion of all of these steps will culminate in the granting of the PhD degree.

Master of Science in Statistics

The Master of Science in Statistics at Florida International University is primarily an applied statistics program. It offers a balance of statistical theory, statistical methodology, and optionally, an area application concentration. The program offers a thesis option and a non-thesis option. Regardless of the concentration or thesis option, the program requires a total of 36 credit-hours as follows: six core courses (18 hours), four elective courses or an area of concentration (12 hours), and either a thesis (6 hours) or two additional elective courses (6 hours) and a comprehensive examination.

Admission Requirements

To be admitted into the program, applicants must meet the university’s graduate admission requirements (see Office of Graduate Admissions in this catalog), GRE scores are required. However, the GRE requirement can be replaced by any nationally and internationally comparable exams that are approved by the Department’s Graduate Committee, such as GEE (Graduate Entrance Exam). If an applicant has an earned graduate degree from an accredited US institution, the Department may waive the GRE requirement. All the applicants must also meet the following departmental requirements:

1. A bachelor’s degree in statistics, mathematics, or in a related field from an accredited university or college. A bachelor’s degree in some other discipline is also acceptable provided the applicant has a suitable mathematics background.
2. A 3.0 or higher (on a 4-point scale) GPA in mathematics and statistics courses.
3. Three letters of recommendation from persons familiar with the applicant’s academic qualifications.
4. International graduate student applicants whose native language is not English are required to submit a score for the Test of English as a Foreign Language (TOEFL) or for the International English Language Testing System (IELTS). A total score of 80 on the iBT TOEFL or 6.5 overall on the IELTS is required.
5. Approval of the departmental graduate committee.
Elective Courses: (12)
A student may select four courses from Lists A, B, and C or may opt for an area of concentration (see below).

Concentration Area: (12)
Students interested in a concentration in Biostatistics/Environmetrics must select two courses from List A and two track-related electives. At least one of these electives must be from outside the department.

Students interested in a concentration in Reliability Analysis/Quality Control must select two courses from List B and two track-related electives. At least one of these electives must be from outside the department.

All electives must be approved by the Graduate Program Director.

List A: Biostatistics/Environmetrics
STA 5826 Stochastic Processes
STA 6176 Biostatistics
STA 6678 Environmental Statistics

List B: Reliability Analysis/Quality Control
STA 5666 Advanced Quality Control
STA 5676 Reliability Engineering
STA 5826 Stochastic Processes

List C: Elective Statistics Courses
STA 5207 Topics in Design of Experiments
STA 5236 Regression Analysis
STA 5507 Nonparametric Methods
STA 5906 Independent Study
STA 6505 Analysis of Categorical Data
STA 6807 Queueing and Statistical Models
STA 6940 Supervised Statistical Consulting
STA 7707 Multivariate Methods I
STA 7708 Multivariate Methods II

Elective Courses from Outside of the Department
Elective courses from outside of the department must be approved by the Graduate Program Director.

Thesis Option: (6)
Students opting to write a thesis must enroll in STA 6971, Thesis Research and STA 6972, Master's Thesis (6 credit-hours total).

Non-Thesis Option: (6)
Students who opt not to write a thesis must take two additional elective courses selected from List C or from outside of the department. These courses must be approved by the Graduate Program Director.

Graduation Requirements
1. Grade and GPA requirements: a) cumulative GPA of 3.0 or higher in all courses, b) an average grade of "B" or higher in all core courses, with a minimum grade of "C" or higher in each core course, and c) a grade of "C" or higher in each concentration or elective course.
2. A candidate who opts to write a thesis must successfully defend the thesis orally and have the written thesis approved by his/her thesis committee.
3. A candidate who chooses the non-thesis option must take and pass a comprehensive examination. Students must follow all regulations of the University Graduate School.

Course Descriptions

Definition of Prefixes

F-Fall semester offering; S-Spring semester offering; SS-Summer semester offering

COT 5310 Theory of Computation I (3). Abstract models of computation; halting problem; decidability and undecidability; recursive function theory. Prerequisite: MAD 3512.

COT 6400 Analysis of Algorithms (3). Complexity behavior of algorithms is described for Set Manipulation, Graph Theory, and Matrix Manipulation problems, among others. P and NP classes of problems reveal an inherent difficulty in designing efficient algorithms. Prerequisite: COP 3530.

MAA 6616 Real Analysis (3). Function spaces, Lebesgue Measure and Integral with applications, properties of Lp spaces, differentiation, Radon-Nikodym theorem. Prerequisites: MAS 3105, MAA 4211, MAP 4401 or MAA 4212.

MAA 6506 Functional Analysis (3). Normed vector spaces, linear operators, Baire Category theorem, Banach fixed point theorem, Hahn-Banach theorem and applications, open mapping /closed graph theorem with applications, Hilbert spaces. Prerequisites: MAP 5407 AND MAA 6616.

MAD 5405 Numerical Methods (3). Advanced ideas and techniques of numerical analysis for digital computation. Topics include: linear and non-linear systems, ordinary differential equations, continuous system modeling techniques, and languages. Prerequisites: MAS 3105 and MAP 2302.

MAD 6409 Numerical Methods II (3). This course provides an exposure to numerical techniques used in solving partial differential equations of mathematical physics and engineering. Prerequisite: MAD 5405.

MAA 6406 Complex Analysis (3). Harmonic functions, normal families, Riemann mapping theorem, univalent functions, infinite products and entire functions, elliptic functions, analytic continuation. Prerequisites: MAA 4211 and MAA 4402.

MAD 7408 Topics in Numerical Analysis (3). Topics include numerical linear algebra, special methods, finite element methods, computational fluid dynamics, signal and image processing. Prerequisite: MAD 6xxx Numerical Methods II.

MAP 5117 Mathematical and Statistical Modeling (3). Study of ecological, probabilistic, and various statistical models. Prerequisites: MAC 2313, COP 2210, MAA 3105; and STA 3033 or STA 3164 or STA 4322.

MAP 5204 Optimization and Linear Algebra (3). Vectors, Euclidean spaces, operations on matrices, rank, determinants, linear and quadratic programming, Kuhn-Tucker techniques for constrained optimization. Prerequisite: MAC 2313.
MAP 5208 Numerical Optimization (3). The generalization of optimization theory and techniques to other formulations comprise a large area of applied mathematics. This course is mainly about convex optimizations. Prerequisites: MAP 2302, MAC 2313, MAS 3105.

MAP 5236 Mathematical Techniques of Operations Research (3). This course surveys the mathematical methods used in operations research. Topics will be chosen from linear programming, dynamic programming, integer programming, network analysis, classical optimization techniques, and applications such as inventory theory. Prerequisites: MAP 5117 and MAS 3105 and either CGS 3420 or COP 2210.

MAP 5255 Mathematical Scientific Computation (3). Programming in Matlab, Graphics in Matlab, Creating GUIs in Matlab, Simulink. Prerequisites: MAC 2313, MAP 2302, MAS 3105.

MAP 5316 Ordinary Differential Equations (3). Existence and uniqueness theorem, matrix formulation, physical applications, regular singular points, autonomous systems, Laplace transform, special topics. Prerequisites: MAA 3200, MAA 4402 and MAS 3105.

MAP 5317 Advanced Differential Equations for Engineers (3). Topics may include Bessel Functions and other special functions arising from classical differential equations, Sturm-Liouville problems, partial differential equations, transform techniques. Credit may not be counted for both MAP 4401 and MAP 5317. Credit for MAP 5317 may not be applied toward the Master’s degree in Mathematical Sciences. Prerequisites: MAC 2313 and MAP 2302.

MAP 5318 Dynamical Systems and Introduction to Chaos Theory (3). Important techniques for linear systems of differential equations and nonlinear systems, as well as applications of these systems in a wide variety of fields. Prerequisites: MAS 3105, or equivalent, or permission of the instructor.

MAP 5407 Methods of Applied Analysis (3). Convergence, fixed point theorems, application to finding roots of equations, normed function spaces, linear operators, applications to numerical integration, differential and integral equations. Prerequisites: MAA 4211, MAP 2302, and MAS 3105.

MAP 5415 Introduction to Fourier Analysis (3). Basic real analysis, and measure theory, LP spaces and convolution, the Fourier transform in $L^2$, Plancherel theorem, application to differential equations and wavelets. Prerequisites: Advanced Calculus, Linear Algebra.

MAP 5467 Stochastic Differential Equations and Applications (3). Review of measure theory, stochastic processes, Ito Integral and its properties, martingales and their generalizations, stochastic differential equations, diffusions. Applications to boundary value problems and finance. Prerequisites: MAS 3105, MAP 4401, MAA 4211, MAA 6616 or permission of instructor.

MAP 6217 Calculus of Variations (3). Fundamental problems, weak and strong extrema, necessary and sufficient conditions, direct methods, optimal control problems, Pontryagin Maximum principle. Prerequisites: MAP 4401 and MAA 6616.

MAP 6218 Stochastic Calculus (3). Discrete time models, Brownian motion, stochastic integration, ITO's integral, Ornstein-Uhlenbeck processes, Girsanov theorem, Black-Sholes model. Prerequisites: STA 4321 or equivalent.

MAP 6326 Partial Differential Equations (3). Basic concepts of first and second order PDE’s applications to optics and wave fronts, Cauchy problem, Laplace equation, Green’s function, Dirichlet problem, heat equation. Prerequisite: MAA 4211.

MAP 6357 Partial Differential Equations II (3). Modern aspects of PDEs. Topics include distribution theory, fundamental solutions, maximum principles, Sobolev spaces, initial and boundary value problems. Prerequisites: MAA 6616 and MAP 6326.

MAP 6630 Numerical Methods in Risk Analysis and Management (3). Quadrature methods, numerical solutions to ODEs and PDEs, Monte Carlo method, applications to asset pricing. Prerequisites: Calculus 3, Matrix Algebra, Diff. Equations.

MAP 6631 Intro to Quantitative Risk Analysis and Management (3). A mathematical introduction to arbitrage-based pricing of derivative securities. Prerequisites: MAC 2313, MAS 3105.

MAP 6632 PDE in Risk Analysis and Management (3). Deterministic and stochastic optimization, dynamic programming, Hamilton-Jacobi equation, forward and backward Kolmogorov equation, Feynman-Kac formula. Prerequisites: Stochastic Calculus, Differential Equations, Calculus 3, Matrix Algebra.

MAP 6635 Risk Analysis and Management I (3). Basic probability, Martingales, Black-Sholes models, Black-Sholes formula, American options. Prerequisites: MAC 2313, MAS 3105, STA 4321. Corequisites: STA 4321 or equivalent.

MAP 6636 Risk Analysis and Management II (3). Discrete and continuous time models, application of stochastic integrals and ITO’s Lemma to Finance, Risk of Neutral Valuation. Prerequisite: MAP 6635.

MAP 7359 Topics in Partial Differential Equations (3). Advanced topics in partial differential equations. Topics may include: mathematical fluid mechanics; inverse problems; microlocal analysis of PDE; spectral analysis and scattering theory. Prerequisite: MAP 6357.

MAS 5145 Applied Linear Algebra (3). Vector spaces and linear maps, solutions of linear systems, orthogonal projection and QR factorization, determinant and eigenvalues of a matrix. Prerequisites: MAS 3105 and MAA 3200.

MAS 5311 Graduate Algebra (3). A study of the basic material on groups, rings and vector spaces. Topics include the Jordan-Holder theorem, structure of modules
over Euclidean domains and canonical forms of matrices. Prerequisites: MAS 4301 or equivalent.

MAS 5312 Galois Theory (3). Extension fields, ruler and compass constructions, fundamental theorem of Galois Theory, cyclotomic and cyclic extensions, solutions of equations by radicals, selected topics. Prerequisites: MAS 5311 or permission of the instructor.

MAS 5315 Algebraic Geometry (3). Introduction to the theory of affine and projective schemes, coherent sheaves and sheaf cohomology. Application to studying algebraic varieties. Prerequisites: MAS 4301, MAA 4402.

MAT 5907 Independent Study (VAR). Individual conferences, assigned reading, and reports on independent investigations.

MAT 5921 Training in Mathematical Exposition (1). Students prepare and present supervised lectures on undergraduate mathematical topics to fellow students. Prerequisite: Graduate standing.

MAT 5970 Master’s Research (1-6). Research toward preparation of master’s project. Prerequisite: Permission of graduate committee.

MAT 6946 Applied Experience Component (1-3). Consists of a one semester (usually summer) internship at private corporation or government agency. Has three parts: i) weekly colloquia in math-science; ii) internship; iii) presentation after internship. Prerequisite: Permission of the department.

MAT 7908 Independent Study (1-3). For senior Ph.D. students to work on topics where standard courses cannot be opened. Could consist of individual conferences, assigned reading, or independent investigations. Prerequisite: Permission of the Math-Stats department.

MAT 7917 Graduate Research Seminar in Mathematics (3). Under supervision of faculty, students will read and present seminal papers a field of mathematics. Course will train students reading and comprehension of research articles, and in preparing talks. Prerequisite: Permission of the department.

MAT 7980 Dissertation Research (1-9). Students conduct dissertation research at the doctoral level in mathematics under faculty supervision. Prerequisite: Permission of Instructor (F,S)

MHF 5107 Graduate Set Theory (3). Zermelo-Frankel axioms, ordinals and cardinals, Godel’s constructible universe, large cardinals, forcing and the independence of the Continuum Hypothesis and the Axiom of Choice. Prerequisites: MHF 4102 or MAA 4211 or permission of the instructor.

MHF 5306 Graduate Mathematical Logic (3). First order languages, construction of models from constants, advanced construction of models, non-standard models, recursion theory, RE sets, Turing degrees, oracle construction. Prerequisites: MHF 4302 or permission of the instructor.

MHF 5325 Theory of Recursive Functions (3). Turing machines, decision problems, coding, s-m-n theorem, Rice’s and Myhill’s theorems, oracles, degrees, finite and infinite injury constructions. Prerequisite: MHF 4302 or COT 5310.

MHF 5345 Mathematical Logic for Linguistics (3). Formal logical systems and applications. Propositional and predicate calculus, proof systems, completeness and incompleteness theorems, recursion. Chomsky hierarchy, formal grammars. Does not fulfill requirements for Mathematics Degree. Prerequisites: MAD 3512 or permission of the instructor.

MHF 5930 Topics in Modern Mathematics (3). Designed to provide student with the opportunity to pursue topics not otherwise covered in other courses. Prerequisites: MAC 2313, MAS 3105.

MTG 5256 Differential Geometry (3). Curves and surfaces in 3-dimensional Euclidean space, Gauss-Bonnet Theorem, Smooth manifolds. Tensors on manifolds, Connections and curvature, Riemannian metrics. Prerequisite: MAC 2313, MAP 2302, MAS 3105 or equivalent.

MTG 5326 Introduction to Algebraic Topology (3). Classification of surfaces, fundamental group, homotopy type, Van Kampen theorem, simplicial complexes, introduction to homology theory. Prerequisites: MAS 4301 and MTG 4302.

MTG 5328 Introduction to Applied Topology (3). Persistence homology and diagrams of families of topological spaces; Stability Theorem; Probability and Statistics on the space of persistence diagrams; Applications to analyzing data. Prerequisite: MAS 3105, MAS 4302, MTG 4302, or equivalent.

STA 5065L SAS Data Analysis Lab (1). Entering data, descriptive statistics, graphing data, crosstabulations, t-tests, correlation and regression, and analysis of variance. Prerequisites: A statistics course and graduate standing or permission of the instructor.

STA 5105L SPSS Data Analysis Lab (1). Topics include: Entering data from various sources, data checking, descriptive statistics, graphing data, crosstabulations, t-tests, correlation and regression, ANOVA, and reliability. Prerequisites: A statistics course or concurrent enrollment in a statistics course, and graduate standing or permission of the instructor.

STA 5106 Intermediate Statistics I (3). Power, measures of assoc., measurement, ANOVA: one-way and factorial, between and within subjects expected mean squares, planned comparisons, apriori contrasts, fixed, random, mixed models. This course may be of particular interest to behavioral sciences. Prerequisites: STA 3111 or STA 3123 or STA 3033; and graduate standing. (F)

STA 5107 Intermediate Statistics II (3). Correlation and regression both simple and multiple, general linear model, analysis of covariance, analysis of nominal data, analysis of categorical data. This course may be of particular interest to behavioral sciences. Prerequisite: Permission of the instructor. (S)

STA 5126/PSY 5206 Fundamentals of Design of Experiments (3). CRD and RCB designs. Latin square designs. Factorial, nested and nested-factorial
STA 5206 Design of Experiments I (3). Design and analysis of completely randomized block, Latin square factorial, nested experiments. Multiple comparisons. Credit for only one of three STA 4202, STA 5126, and STA 5206 courses will be granted. Prerequisites: STA 3033 or STA 3164 or STA 4322 or (STA 3163 and STA 4321).

STA 5207 Topics in Design of Experiments (3). This applied course in design of experiments covers topics such as split-plot design, confounding, fractional replication, incomplete block designs, and response surface designs. Prerequisite: STA 5206.

STA 5236 Regression Analysis (3). Simple, multiple and polynomial regression, analysis of residuals, model building and other related topics. Credit for both STA 4234 and STA 5236 will not be granted. Prerequisites: STA 3112 or STA 3123 or STA 3164, or STA 6167.

STA 5446-STA 5447 Probability Theory I and II (3-3). This course is designed to acquaint the student with the basic fundamentals of probability theory. It reviews the basic foundations of probability theory, covering such topics as discrete probability spaces, random walk, Markov Chains (transition matrix and ergodic properties), strong laws of probability, convergence theorems, and law of iterated logarithm. Prerequisite: MAC 2313.

STA 5507 Nonparametric Methods (3). Distribution-free tests: sign, Mann-Whitney U, Wilcoxon signed rank, Kruskal-Wallis, Friedman, etc. Rank correlation, contingency tables and other related topics. Credit for both STA 4502 and STA 5507 will not be granted. Prerequisites: STA 3112 or STA 3123 or STA 3164, or STA 6167.

STA 5666 Advanced Statistical Quality Control (3). Review of statistical methods useful in quality improvement. Statistical process control. Taguchi’s and Deming’s philosophies. Control charts. Process capability analysis. Acceptance sampling plans. Prerequisites: STA 3033 or STA 3163 or STA 4321 or equivalent.

STA 5676 Reliability Engineering (3). The course material is designed to give the student a basic understanding of the statistical and mathematical techniques which are used in engineering reliability analysis. A review will be made of the basic fundamental statistical techniques required. Subjects covered include: distributions used in reliability (exponential, binomial, extreme value, etc.); tests of hypotheses of failure rates; prediction of component reliability; system reliability prediction; and reliability apportionment. Prerequisite: STA 4322.

STA 5800 Stochastic Processes for Engineers (3). Probability and conditional probability distributions of a random variable, bivariate probability distributions, multiple random variables, stationary processes, Poisson and normal processes. Prerequisites: MAC 2313, MAP 2302, STA 3033.

STA 5826 Stochastic Processes (3). This course is intended to provide the student with the basic concepts of stochastic processes, and the use of such techniques in the analysis of systems. Subjects include: Markov Processes, queueing theory, renewal processes, birth and death processes, Poisson and Normal processes. Applications to system reliability analysis, behavioral science, and natural sciences will be stressed. Prerequisite: STA 5447.

STA 5906 Independent Study (1-6). Individual conferences, assigned reading, and reports on independent investigation.

STA 6166 - STA 6167 Statistical Methods in Research I and II (3-3). For non-mathematical sciences graduate students. A non-calculus exposition of methods and applications of statistical techniques for the analysis of data. Statistical packages will be used. Prerequisite: Graduate standing. (F,S)

STA 6176 Biostatistics (3). Statistical analysis of data encountered in medical sciences. Analysis of count data, Kaplan-Meier survival analysis, Cox proportional hazards model, analysis of covariance, logistic regression, etc. Prerequisites: STA 3163 or equivalent.

STA 6196 Statistics for Environmental Sciences (3), Environmental Quality Data, Binomial, Poisson, Normal, Lognormal, and Extreme value distributions. Prediction and Tolerance Intervals, Hypothesis Testing of Environmental Quality Data, Risk Assessment, Regression, Spatial Statistics. Prerequisites: STA 2122, STA 3145, STA 6166 or the equivalent.

STA 6244 Data Analysis I (3). Exploratory data analysis; testing of distributional assumptions; Chi-square tests, tests for means, variances, and proportions. Prerequisites: STA 3033, STA 4322, or STA 6327.

STA 6246 Linear Models (3). Introduction to the theory of linear models. Distribution of linear and quadratic functions of normal vectors. Development of inferential procedures for simple and other more complex linear models. Prerequisites: MAS 3105, STA 6247, and STA 6327.

STA 6247 Data Analysis II (3). Analysis of variance, regression analysis. Analysis of covariance, quality control, correlation, empirical distributions. Prerequisites: MAS 3105 and STA 6244.

STA 6326 Mathematical Statistics I (3). An introduction to the theories underlying statistical analysis. Basic concepts of probability theory, combinatorial analysis, random variables, and expectation. Prerequisite: MAC 2313.

STA 6327 Mathematical Statistics II (3). Estimation of parameters, tests of hypotheses, regression, non-parametric methods, analysis of variance, and multivariate concepts. Prerequisite: STA 6326.

STA 6505 Analysis of Categorical Data (3). Analysis of contingency tables, measures of association, logit and loglinear models. Prerequisites: STA 5107 or STA 5236 or STA 6167.

STA 6636 High Dimension Data Analysis (3). Statistical techniques used to analyze high dimensional data sets. Topics include machine learning, high dimensional data, discriminant analysis and clustering. Prerequisites: STA 6246 and STA 5236 or equivalent.

Lognormal processes. Prerequisites: MAC 2312 and STA 3164.

**STA 6746 Multivariate Statistical Analysis (3).** Multivariate normal, Wishart and Hotelling's distributions. Statistical inferences based on one or two samples. MANOVA. Principal component analysis, factor analysis, and cluster analysis. Prerequisites: STA 3112 or STA 3123 or STA 6167.

**STA 6807 Queueing and Statistical Models (3).** Review of probability concepts, basic probability distributions, Poisson process, queuing models, statistical models. Prerequisites: Permission of the instructor, MAC 2312 and either STA 3033 or STA 4321.

**STA 6930 Special Topics (3).** A course designed to give students an opportunity to pursue special studies not otherwise offered in the curriculum. May be repeated. Prerequisite: Permission of the instructor.

**STA 6940 Supervised Statistical Consulting (3).** Formulation of statistical problems from client information, consulting session management, interpersonal aspects of consulting, problem solving techniques. Prerequisites: Permission of the instructor, STA 4102, STA 6247, and STA 6327.

**STA 6971 Thesis Research (1-6).** Supervised research on theoretical or applied statistics leading to a thesis. Repeatable. Prerequisite: Permission of student's program committee.

**STA 6972 Master's Thesis (1-6).** Thesis completion and submission in partial fulfillment of Master's degree requirements. Prerequisite: Permission of student's program committee.

**STA 7707 Multivariate Methods I (3).** Multivariate normal, Wishart and Hotelling's distributions. Inferences for one and two mean vectors. Profile analysis. One- and two-way MANOVA. Multivariate multiple regression. Prerequisites: STA 3112 or STA 3123. (F)
